

FEATURES AND BENEFITS

Easy to Install

The Aladdin Light Lift is neatly tucked away in the area above the ceiling, leaving no visible indication of the system. Installation by a licensed electrician is simple, in both new construction and existing homes. And, once in place, the chandelier can be installed at floor level safely and economically.

Designed for Years of Trouble-Free Operation

The Aladdin Light Lift is designed for years of trouble-free operation. The patented system has been rigorously tested and uses the latest technology for electrical components and its gearing mechanism. Even heavy chandeliers are no problem for a properly sized Aladdin Light Lift.

Safety Benefits

Independently tested... UL and CUL Listed (ALL1000 Pending)

Each model is equipped with two separate independent locking systems to securely hold the chandelier. For maximum safety, electrical current to the chandelier is automatically disconnected while the chandelier is lowered. There is no risk of electrical shock while cleaning or changing bulbs.

Warranty

The Aladdin Light Lift is backed by a full 1-year limited warranty on all parts and components.

Just Turn the Key

The Aladdin Light Lift comes with a special Keyswitch which can be conveniently installed in any new or existing wall. The Keyswitch is child resistant and prevents accidental activation of the light lift. The chandelier is lowered by simply inserting the key and turning the switch. Releasing the key stops the chandelier at the height you choose. It's that easy.

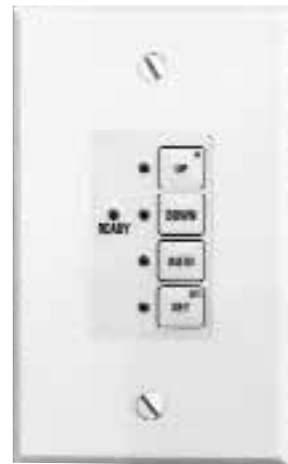

**Standard on ALL200 and ALL300*

**Special Order on ALL700 and ALL1000*

SmartLift Controller

The SmartLift Controller is designed to operate the Aladdin Light Lift with touch pad controls. It can be programmed to automatically stop at any desired height above the floor. It automatically shuts off at the ceiling without being programmed.

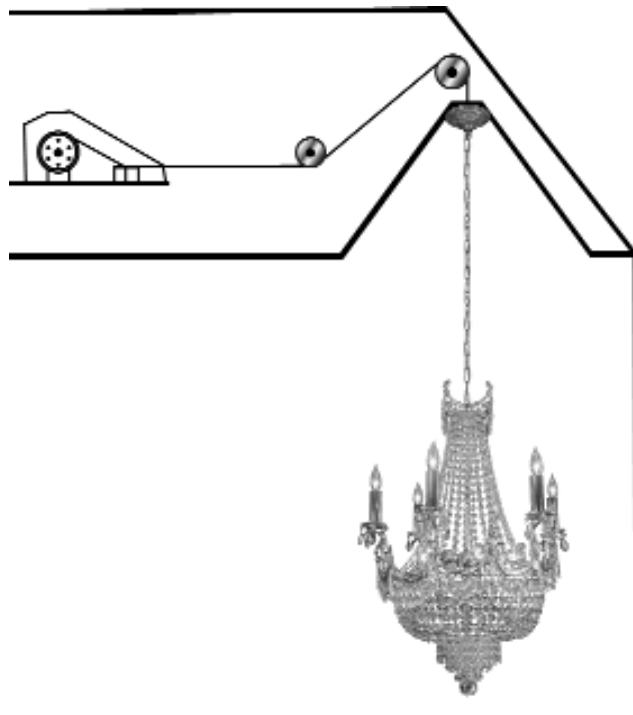

**Standard on ALL700 and ALL1000*

**Special Order on ALL200 and ALL300*

No Access? Aladdin has the solution!

Aladdin Light Lift offers a remote mounting option that consists of a unique system of cables, brackets, and pulleys which are built into the light lift.

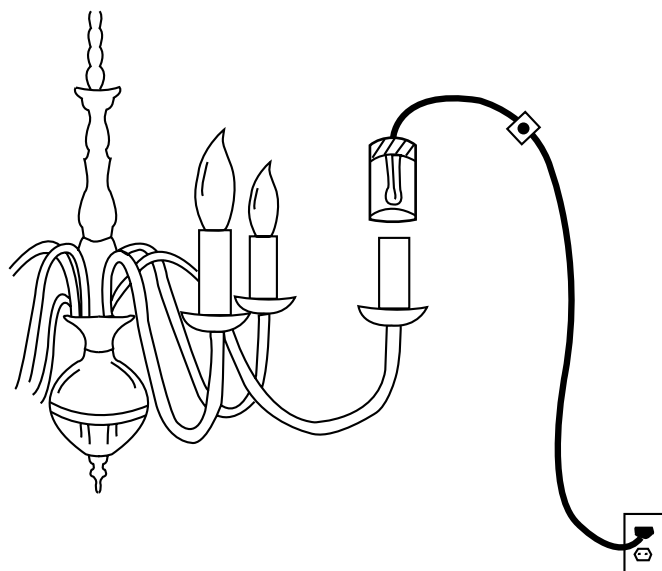

The remote mounting option is needed when no direct access is available above the chandelier. This option **MUST** be ordered with the light lift. Remote mount options or directional pulleys can not be added to a standard installation light lift.

Relamping Cord

The relamping cord is used to temporarily relight the chandelier at floor level.

To operate: After lowering the chandelier to floor level, unscrew one bulb. Remove the end cap and screw the metal chandelier base inside the plastic tube down into the chandelier socket. Plug the Relamping Cord into an extension cord and plug into a wall outlet. This will relight all the bulbs in the chandelier. The Relamping Cord is designed for candelabra-base fixtures.

Caution: This is a temporary relamping source. Do not use this cord to permanently light a chandelier.
